Font:

- 1 04B_11.TTF, NimbusSanTCon that already embedded into Flash.

Internal Flash Help:

Our Flash has comment in each action scripts lines, it helps you to understand better this file and way of working.

About This Shop:

This is an ecommerce Digital Delivery Flash Shop

All Products and their properties like description Texts, price and photos are dynamic and initialize from separate XML files then you can update them very easily.

Note: You can customize all Contents of this Shop without Opening the Fla file!

Contents like:

- 1 Product main category names
- 2 Products Description Texts, Price and Images
- 3 Music and Movie files
- 4 Contact Form variables
- 5 XML NEWS Ticker Text and Images
- 6 and many more ...

What's new in this Shop?

- 1 Four separate main categories for Your Digital Products, I name these Software, Music, Movie and Game.
- 2 Preview Options for Music and Movie Products
- 3 XML News Ticker for each main category
- 4 Contact Form with confirmation email to Administrator and Customer
- 5 And a Special Design that you can see there yourself!
- 6 After each PayPal payment Confirmation, the Shop create and send two emails to Administrator and Buyer, this email contains a Download email with expiration Time Limit, this Limit can be change in setting.php

What kind of Products can I sell with this Shop?

I designed this shop like an Ecommerce website, we have 4 main categories as Follows:

- 1 Software
- 2 Music
- 3 Movie
- 4 Game

You can change these Categories name according to your needs, each of them feed separately from a definite XML file, you can find these in xml Folder in Project root.

You can sell all type of Digital Products with this Shop.

How should I customize this Shop for my Products?

- 1 First change each XML file content with your Products Information
- 2 Put your Download files in Zip Format in Download Folder
- 3 Enter the Product List information in setting.php, to doing this just look at the current sample files

- 4 Enter your PayPal email in setting.php
- 5 Enter your Administrator email in setting.php
- 6 Put your MP3 Preview files in Music folder
- 7 Put your Movie Preview in FLV format in FLV folder
- 8 Put your Product Images in images folder, as you see we have only Preview image for Software and Game, Movie and Music have their special way of previewing

How should I customize the Contact Form?

- 1 Change email.php content file with your Information
- 2 Change also the AnswerText.txt, this is the confirmation Text for Your Customer after sending an email.

How should I customize the Shop news Ticker?

- 1 Each Product category calls a separate xml file to feed the news Ticker Movie clip, find this xml files under xml/NewsXML Folder
- 2 You can just put Images for your news content, put these images under images/News Images

How can I change the news Ticker delay?

For each session, you will find a separate News Ticker in flash library:

- :::: GameNewsTickerMC ::::
- :::: MovieNewsTickerMC ::::
- :::: MusicNewsTickerMC ::::
- :::: SoftwareNewsTickerMC ::::

Inside each above movieclips, in action Layer, line39, you will find the delay function. current delay set to 8000 or 8 seconds.

Note: Don't change the quantity of products in xml file.

How should I configure my Digital Delivery setting?

Here is a list of complete setting process for Digital Delivery Shop:

- PayPal setting in XML file
- Product setting in XML file
- Product setting in PHP file [\[This is necessary for PayPal IPN Tracking to create the file download link\]](#)
- Setting IPN URL inside your PayPal account
- Setting your Shop Address in PHP file

PayPal setting

First open **each session xml file** from project root, XML folder.

In first product node of XML file, you will find following items:

- **currency="USD"**
- **paypalemail="YOUR PAYPAL EMAIL"**

Product setting in XML

Inside **xml files** you will find all products info, for each Product we have a separate xml node as follows:

```
<Item name="BUS JUMP CHAMPIONSHIP" paypalemail="YOUR PAYPAL EMAI" paypalcurrency="USD">
  <details ids="2004001" photo="images/game/2008001.jpg" price="1.00" quantity="1"
currency="USD">
  <![CDATA[YOUR PRODUCT DESCRIPTION TEXT IN CDATA FORMAT]]>
```

```
</details>
</Item>
```

Important Note1: Here we should mention again that, only first product includes **paypal email** value like, the rest products don't need this:

```
<Item name="BUS JUMP CHAMPIONSHIP" paypalemail="YOUR PAYPAL EMAI" paypalcurrency="USD">
  <details ids="2004001" photo="images/game/2008001.jpg" price="1.00" quantity="1"
currency="USD">
  <![CDATA[YOUR PRODUCT DESCRIPTION TEXT IN CDATA FORMAT]]>
  </details>
</Item>
```

Notice that this product doesn't carry paypal email on its node:

```
<Item name="ROAD RIDER V1.0">
  <details ids="2004002" photo="images/game/2008002.jpg" price="1.00" quantity="1" currency="USD">
  <![CDATA[YOUR PRODUCT DESCRIPTION TEXT IN CDATA FORMAT]]>
  </details>
</Item>
```

Product setting in PHP

First open **setting.php** from project root. Here we should set following items:

1. Our Shop URL that will use in whole Digital Delivery function > **Line 5**
2. Shop Owner PayPal email address > **Line 13,14,16**
3. Some Texts that will appear in our order notification email > **Line 16,26 till 32, 36 till 41**
4. Shop currency same as you set in XML file > **Line 18**
5. Time limit for download Link, default is 24 Hours > **Line 22**

6. Setting Products properties array, as we mentioned before this Information should be set exactly as they set in XML file, the product names, IDs and prices should be 1:1 as they are in XML file, otherwise PayPal IPN are not able to tracking the right product after purchase.

7. You should make Zip files of each your Digital Products and put all of them in downloads folder in project root, in product setting array you should refer each product to their zip file as you can see in sample files.

For example Product: BUS JUMP CHAMPIONSHIP --> BusJump.zip [**Space is not valid in zip file name**]

```
$products[2004001] = array('BUS JUMP CHAMPIONSHIP','1.00','downloads/BusJump.zip');
```

Security Note: Digital Delivery Shop will create a random secure link from these zip files inside notification email, so the users not able to tracking downloads folder after their purchase.

What is my shop URL?

Consider your website URL is: <http://www.yourweb.com>

You make a folder for your shop and upload all files under this folder, lets name it *DIGITAL_SHOP*, so your shop URL will be: http://www.yourweb.com/DIGITAL_Shop/

Setting IPN URL inside your PayPal account

This will be the last step of your Digital Delivery Shop setting.
For this you should login to your PayPal account.

Note: Here we use a Translation from our German paypal account, maybe there are some differences with your account.

After Login:

My Profile > Seller Preferences > Settings for instant payment confirmation >

There you should set your URL as follows:

yourshopURL+paypal.php , according to above shop URL sample, it will be something like:

http://www.yourweb.com/DIGITAL_Shop/paypal.php

You can also inform the users after each Order about your shop download Link Terms and condition, for this you can make a normal html page, name it **confirm.html**, put your text inside it, for example:

[Thanks for your Purchase](#)
[Download Link was sent to your Mailbox, link will be valid in next 24 Hours](#)

Save it in shop folder, now in your PayPal account:

My Profile > Seller Preferences > Website Payment Options

There set your Return URL as: http://www.yourweb.com/DIGITAL_Shop/confirm.html

Now PayPal redirect your customers after each order into this page.

After reading this help if you still needs help or have questions, please contact us only from our **Flashden Profile page**, our support Team will help you ASAP.

Image customizing:

In Project root you will find the PSD folder, there you will find all PSD files.

Thanks for Downloading this File, Good Luck using this!
