- Swis721 LtCn BT – Free Font
Download Link: <http://font-cat.com/font-en-8676.html>

AS3 Flash Facebook Shop is a powerful dynamic shop, you can easily change all shop contents, Highlight Colours, Shop Labels and Texts via XML file. This is a Flash XML Shop with PayPal & Bank Account Payment option, this shop includes four different modules on XML product setting that cover almost every type of product, but what they are?

- **id="global"**, for simple products without any options to choose
- **id="modeA"**, for Products with different Colours, sizes
- **id=" modeB"**, for products with different Colours
- **id=" modeC"**, for products with different Sizes

What's new in this Shop?

- We have a Category on products with special design, each category can be set with different shop module ID [global, modeA, modeB and also modeC], as you see with AS3 Flash Facebook Shop, you be able to sell a wide range of products in your shop.
- Dynamic Code for Shop Highlight Colour just by one click: 0x0099CC in TemplateColour.txt
- AS3 Smooth Shopping Cart with full options
- Smooth Design with dynamic Product Categories and unlimited Product support

How customize this Shop?

Shop Path:

Just open and edit ShopPath.txt, it would be the Path you will upload the shop under your server.

Like: <http://www.yourdomain.com/ShopFolderName/>

A Sample under our Server: http://www.nhstudio.de/download/AS3/FacebookShop_AS3/

Flash Setting to work on Facebook IFrame:

There are two values that we have to set inside Flash source to work shop under Facebook IFrame

For this after Installing necessary Fonts, open Flash source, go to Layer "action shop path" >Lines 10 and 19:

```
DynamicPathLoader.load(new URLRequest("http://yourdomain.com/ShopFolder/ShopPath.txt"));
```

```
DynamicPathLoader.load(new URLRequest("http://yourdomain.com/ShopFolder/TemplateColour.txt"));
```

Shop High Light Colour:

Just open and edit TemplateColour.txt, it will change the Shop High Lights Colour Overall!

Shop Logo:

A dynamic Transparent PNG file, It will found under: images/logo.jpg

Shop PayPal and Currency Settings:

You need only open xml/PayPal.xml and edit:

```
<Payments>  
  <Item email="YOUR PAYPAL EMAIL" currency="USD" sign="$" shipment="10.00"/>  
</Payments>
```

Shop Shipment Price Setting:

Open xml/PayPal.xml and edit:

```
<Payments>  
<Item email="YOUR PAYPAL EMAIL" currency="USD" sign="$" shipment="10.00"/>  
</Payments>
```

If you don't need shipment price, just set the value as **shipment="0.00"**

Shop Payment Module Settings:

This shop has two Payment Modules as PayPal and PHP Mail Order, however you can Inactive each one via XML file. Just Open xml/PaymentSetting.xml and edit values with yes or no (small letters – case sensitive)

```
<Payments>
```

```
  <Item paypal="yes" mailorder="yes"/>
```

```
</Payments>
```

Order Form and Confirmation Email Contents Settings:

For setting your Order Form and confirmation emails:

Open send_email.php file from project root in a code editor program,

- At Lines 9 and 58 set your **admin email address**
- At Line 58 enter your shop name, this will be used in confirmation emails
- Update also Lines 54 until 59, this is the content of email that will be sent to Customers after each order
- Email Content Text can be edit here from Line 19 till 58, but variables should stay as they are.
- You can also Share your Bank Account Informations in Line 44-49 if you will ask your customers for Money with this email.

Customizing Shop Labels:

You need only open xml/Labels.xml and edit used Labels if needed:

```
<Labels>
  <Item label="ADD TO CART"/>
  <Item label="LOADING CATEGORY PRODUCTS"/>
  <Item label="COLOUR"/>
  <Item label="SIZE"/>
  <Item label="VIEW CART"/>
  <Item label="CHECKOUT"/>
  <Item label="EMPTY CART"/>
  <Item label="COLOUR / SIZE REQUIRED!"/>
  <Item label="MAIL ORDER"/>
  <Item label="FULL NAME"/>
  <Item label="ADDRESS"/>
  <Item label="TELEPHONE"/>
  <Item label="EMAIL"/>
  <Item label="MESSAGE"/>
  <Item label="SEND"/>
  <Item label="RESET"/>
  <Item label="PLEASE FILL ALL FIELDS!"/>
  <Item label="INVALID EMAIL!"/>
  <Item label="SEND EMAIL, PLEASE WAIT..."/>
  <Item label="THANKS FOR YOUR ORDER!"/>
</Labels>
```

Main Category Setting:

It comes from xml/ main_menu.xml

```
<MainMenu>
  <Items>
    <!-- global is a Module for Products without Colour and Size -->
    <Item id="global" name="CATEGORY ONE" src="Group001.xml"/>
    <!-- modeA is a Module for Products with both Colour and Size -->
    <Item id="modeA" name="CATEGORY TWO" src="Group002.xml"/>
    <!-- modeB is a Module for Products only with Colour -->
    <Item id="modeB" name="CATEGORY THREE" src="Group003.xml"/>
    <!-- modeC is a Module for Products only with Size -->
    <Item id="modeC" name="CATEGORY FOUR" src="Group004.xml"/>
  </Items>
</MainMenu>
```

Note: For example If all your Products should have Size and Colours, set all Category ids as ModeA and use the same xml format as current one.
