

# XML Tile Template

This Flash File Created with FlashCS3 – ActionScript3.0

Size: Resizable Movie – 65 KB

## About this File:

This is a simple XML Flash Template with PHP contactForm & Autoresponder.  
Each Block Label and contents(Texts and Images) are total dynamic and feeds via a XML file.  
The Template BackgroundSound can also be replaced via xml file.

## How should we customize this Template?

We have Four Block or session in our Template, you can rename them due to your needs in xml file and update their CDATA contents (Texts and Images) very easily!

## Can we load a swf file into the content Text?

Yes, it's like an image implementation:

```
</img>
```

## How can i replace a Title for my Template?

For doing this just open the menu.xml and replace the: TemplateTitle="YOURS.COM"

## Need a Long Title for your Template?!

We prepare this for about 20 character but if you need more, open the flash source, in Flash Library: open Menu folder>TemplateTitle MovieClip, there you can add the text width with keeping the left alignment.

## How can i change the RollOver Colour of each Block?

First open the Flash source, in Library open the Menu Folder, there you can find all four RollOver MovieClips, there you can change them in Radial Mode.

## How can i change the Background Image of Contact Form?

First open the Flash source, in Library open the ContactForm Folder> ::: ContactFormMC :::>Layer Image  
For best result, prepare your Image in same size.

## How can i replace the Template Background Sound?

First put your MP3 file in music folder, then open menu.xml file and replace your song name in first line:  
TemplateSound="music/adg3.com\_freeForm.mp3"

## How should i set the Contact Form and the Autoresponder?

For doing this, first open the email.php:

- 1- Enter your Admin email address in Line10 and Line41
- 2- Enter your notification message in Line40

3- open also AnswerText.txt from Project root, this is your Autoresponder Text, replace the text and save it  
Now your Contact Form is ready to use, you should test this first Online or Local with a PHP server+mailserver.

**Important: Before opening the Fla source, install all project fonts on your system.**

Thanks for Downloading this File, Good Luck using the file in your projects!
