

Flash XML Shop Pro | XML setting Instruction for PRODUCTS TYPE C - PTC:

Considering we have a Product in different Sizes (for example 28, 30, 32, 33, 34 and 36), we start setting our XML as follow:

```
<Item name="NH Jean Trouser" price="80.00" photo_front="images/PTC/Trouserfront.jpg" photo_back="images/PTC/Trouserback.jpg">
  <size size1="28"/>
  <size size2="30"/>
  <size size3="32"/>
  <size size4="33"/>
  <size size5="34"/>
  <size size6="36"/>
<description>
  <![CDATA[HERE IS YOUR TEXT IN HTML FORMAT]]>
</description>
</Item>
```

Note: If you have one Photo for your Product, just remove the second value, like:

```
<Item name="NH Jean Trouser" price="80.00" photo_front="images/PTC/Trouserfront.jpg">
```

Note: In PTC mode, all products have a unique price, just different Sizes.

Note: You can also set another Size Format like: S, XS, M, L, XL and XXL, or a combination of both formats like: 29, 30, 32, L, XL and XXL

Or consider a Jacket in Three Sizes and only with one product photo:

```
<Item name="NH Jean Jacket" price="120.00" photo_front="images/PTC/Jacket.jpg">
  <size size1="29"/>
  <size size2="S"/>
  <size size3="M"/>
<description>
  <![CDATA[HERE IS YOUR TEXT IN HTML FORMAT]]>
</description>
</Item>
</Item>
```
